1. Introduction

Part 6A of the *Privacy and Personal Information Protection Act 1998* (NSW) (PPIP Act) establishes the NSW Mandatory Notification of Data Breach (MNDB) Scheme. The MNDB Scheme requires every NSW public sector agency bound by the PPIP Act to notify the Privacy Commissioner and affected individuals of eligible data breaches. Under the scheme, public sector agencies are required to prepare and publish a Data Breach Policy (DBP) for managing such breaches as well as maintaining an internal register and public register of eligible data breaches.

This policy outlines Information and Privacy Commission's (IPC) approach to complying with the MNDB Scheme, the roles and responsibilities for reporting data breaches and strategies for containing, assessing and managing eligible data breaches.

2. Scope

This policy applies to all staff and contractors of the IPC. This includes temporary and casual staff, private contractors and consultants engaged by the IPC to perform the role of a public official. This policy also applies to third party providers, who hold personal and health information on behalf of the IPC.

This policy will be reviewed in 12 months' time or where improvements are identified in response to a data breach whichever occurs sooner.

3. Purpose

The purpose of this policy is to provide guidance to IPC staff on data breaches of IPC held data in accordance with the requirements of the PPIP Act.

This policy sets out how the IPC will respond to data breaches involving personal information. The IPC acknowledges that not all data breaches will be eligible data breaches but regardless the IPC takes all data breaches seriously. The policy details:

- what constitutes an eligible data breach under the PPIP Act
- roles and responsibilities for reporting, reviewing and managing data breaches
- the steps involved in responding to a data breach and reviewing systems, policies and procedures to prevent future data breaches.

Effective breach management, including notifications, assists the IPC in avoiding or reducing possible harm to both the affected individuals/organisations and the IPC, and may prevent future breaches.

4. Roles and responsibilities

The following staff have identified roles under the DBP:

- The Director Business Improvement is responsible for implementing this Policy, reporting data breaches to the Chief Executive Officer and all notifications and actions for eligible data breaches.
- The Manager Systems and Corporate Services is responsible for investigating data breaches, preparing the Data Breach Report and Action Plan and maintaining the internal and public registers for data breaches.
- The Manager Communications and Corporate Affairs will provide advice on the communication strategy and messaging to affected individuals and external reporting agencies.
- All IPC Employees: all employees have a responsibility for immediately reporting a suspected data breach in accordance with this policy.

All staff and contractors have a responsibility to notify the Director Business Improvement of any data breaches within one business day of becoming aware that a data breach has occurred and provide information about the data breach.

5. What is an eligible data breach?

The definition of personal information for the purposes of the MNDB Scheme includes both 'personal information' as defined in section 4 of the PPIP Act and 'health information', as defined in section 6 of the *Health Records and Information Privacy Act 2002* (HRIP Act). This means that for the purposes of the MNDB Scheme, 'personal information' means *information or an opinion about an individual whose identity is apparent or can reasonably be ascertained from the information or opinion* and includes information about an individual's physical or mental health, disability, and information connected to the provision of a health service.

A data breach occurs when personal information held by an agency (whether held in digital or hard copy) is subject to unauthorised access, unauthorised disclosure or is lost in circumstances where the loss is likely to result in unauthorised access or unauthorised disclosure.

This may or may not involve disclosure of personal information external to the agency or publicly. For example, unauthorised access to personal information by an agency employee, or unauthorised sharing of personal information between teams within an agency may amount to a data breach.

A data breach may occur as the result of malicious action, systems failure, or human error. A data breach may also occur because of a misconception about whether a particular act or practice is permitted under the Information Protection Principles (IPPs).

Examples of data breaches include:

- **Human error**
 - When a letter or email is sent to the wrong recipient.
 - When system access is incorrectly granted to someone without appropriate authorisation.
 - When a physical asset such as a paper record, laptop, USB stick or mobile phone containing personal information is lost or misplaced.
 - When staff fail to implement appropriate password security, for example not securing passwords or sharing password and log in information
- **System failure**
 - Where a coding error allows access to a system without authentication, or results in automatically generated notices including the wrong information or being sent to incorrect recipients.
 - Where systems are not maintained through the application of known and supported patches.
- **Malicious or criminal attack**
 - Cyber incidents such as ransomware, malware, hacking, phishing or brute force access attempts resulting in access to or theft of personal information.
 - Social engineering or impersonation leading into inappropriate disclosure of personal information.
 - Insider threats from agency employees using their valid credentials to access or disclose personal information outside the scope of their duties or permissions.

- Theft of a physical asset such as a paper record, laptop, USB stick or mobile phone containing personal information.

The MNDB Scheme applies where an 'eligible data breach' has occurred. For a data breach to constitute an 'eligible data breach' under the MNDB Scheme, there are **two tests to be satisfied**:

1. There is an unauthorised access to, or unauthorised disclosure of, personal information held by a public sector agency or there is a loss of personal information held by a public sector agency in circumstances that are likely to result in unauthorised access to, or unauthorised disclosure of, the information, **and**
2. A reasonable person would conclude that the access or disclosure of the information would be likely to result in serious harm to an individual to whom the information relates.

The term 'serious harm' is not defined in the PPIP Act. Harms that can arise as the result of a data breach are context-specific and will vary based on:

- the type of personal information accessed, disclosed or lost, and whether a combination of types of personal information might lead to increased risk
- the level of sensitivity of the personal information accessed, disclosed or lost
- the amount of time the information was exposed or accessible, including the amount of time information was exposed prior to the agency discovering the breach
- the circumstances of the individuals affected and their vulnerability or susceptibility to harm (that is, if any individuals are at heightened risk of harm or have decreased capacity to protect themselves from harm)
- the circumstances in which the breach occurred, and
- actions taken by the agency to reduce the risk of harm following the breach.

Serious harm occurs where the harm arising from the eligible data breach has, or may, result in a real and substantial detrimental effect to the individual. The effect on the individual must be more than mere irritation, annoyance or inconvenience.

Harm to an individual includes physical harm; economic, financial or material harm; emotional or psychological harm; reputational harm; and other forms of serious harm that a reasonable person in the agency's position would identify as a possible outcome of the data breach.

6. Systems and processes for managing data breaches

The IPC has established a range of systems and processes for preventing and managing data breaches.

The IPC's IT network and infrastructure is managed by the Department of Customer Services (DCS) who have implemented a number of cyber security measures to mitigate the risk of data breaches. This has included projects to increase cyber security maturity, cyber security training for all staff (including threat trends), Data Loss Prevention, and procedures for the sharing of personal and sensitive information.

The IPC will ensure all third-party providers who store personal and health information on behalf of the IPC, are aware of the MNDB Scheme and the obligations under this Policy to report any data breaches to the IPC.

A voluntary DBP has been in place since 2016 and the IPC has voluntarily reported data breaches to the Privacy Commissioner since this time. This policy establishes a process for reporting, managing and responding to data breaches including notifications to the Privacy Commissioner and affected individuals. The Policy also includes steps for reviewing, responding, and developing remedies for preventing data breaches.

The IPC also maintains an internal register of data breaches and has implemented recommended changes to systems and policies in response to reviewing the causes of data breaches to assist in preventing future breaches.

Presentations and training have been provided to IPC staff on the MNDB Scheme and reporting and managing data breaches. The IPC will continue to review the training needs of staff with respect to data breaches and provide training in reporting, managing and responding to data breaches.

The IPC has included the risk of a cyber security incident (which may involve a data breach) within its Risk Register and established controls to mitigate this risk and its impact on the IPC's systems, data holdings and individuals. The loss of IT systems as a result of a cyber security incident is included in the IPC's Business Continuity Plan. The IPC also conducts annual cyber security exercises to test the responsiveness of the Business Continuity Plan to a cyber-attack on the IPC's IT systems and includes DCS cyber security and information security experts in the exercise.

7. Reporting and responding to a data breach

The IPC Director Business Improvement must be informed of any data breach to ensure the application of this policy, including making notifications to the Privacy Commissioner for eligible data breaches and affected individuals.

There are five key steps required in responding to a data breach:

1. Initial report and triage
2. Contain the breach
3. Assess and mitigate
4. Notify
5. Review.

Each step is set out in further detail below. The first four steps should be carried out concurrently where possible. The last step provides recommendations for longer-term solutions and prevention strategies.

The Director, Business Improvement or CEO nominee will coordinate with DCS and/or its service providers to address and respond to identified data breaches related to its IT systems.

Step one: Initial report and triage

A staff member, contractor or third-party provider is to notify the Director Business Improvement within one business day of becoming aware that a data breach has occurred and provide information about the type of data breach as detailed in Section 5 of this Policy. The Director Business Improvement will notify the CEO immediately of a suspected eligible data breach. The Manager Systems and Corporate Services will review the information provided to determine whether it is an eligible data breach under the MNDB Scheme, complete the Data Breach Report and Action Plan and include all data breaches in the Internal Data Breach Register (D23/028517/DJ). Members of the public are also encouraged to report any data breaches to the IPC in writing by using the contact options available on our [website](#). If a data breach occurs as a result of action from staff within the IPC's Business Improvement Team, the Director Business Improvement will immediately notify the CEO, who will determine whether a Data Breach Response Team will be convened to undertake steps 2-5 in the process of responding to a data breach. The CEO may also consider convening a Data Breach Response Team, where a data breach involves highly sensitive information, has a high risk of harm to individuals and affects more than one individual.

Step two: Contain the breach

Containing the breach is prioritised by the IPC. All necessary steps possible must be taken to contain the breach and minimise any resulting damage. For example, recover the personal information, shut down the system that has been breached, suspend the activity that led to the breach, or revoke or change access codes or passwords.

If a third-party is in possession of the data and declines to return it, it may be necessary for the IPC to seek legal or other advice on what action can be taken to recover the data. When recovering data, the IPC will make sure that copies have not been made by a third party or, if they have, that all copies are recovered. This can include receiving written confirmation from a third-party that the copy of the data that they received in error, has been permanently deleted.

Step three: Assess and mitigate

To determine what other steps are needed, the IPC will undertake an assessment of the type of data involved in the breach, whether the breach is an eligible breach under the MNDB Scheme, and the risks and potential for serious harm associated with the breach. The Data Breach Report and Action Plan will be used for reporting on the investigation of the breach and authorising actions in response. The Manager Systems and Corporate Services will prepare a report and provide to the Director Business Improvement who will review the proposed actions and recommendations of the report prior to the Report being provided to the CEO for approval. Data Breach Report and Action Plans are to be saved in IPC's electronic record keeping system (22/56/DJ)

The Director Business Improvement will be responsible for the implementation of proposed actions and recommendations.

Some types of data are more likely to cause harm if it is compromised. For example, personal information, health information, and security classified information will be more significant than names and email addresses on a newsletter subscription list. Given the IPC's regulatory responsibilities, release of case-related personal information will be treated very seriously.

A combination of data will typically create a greater potential for harm than a single piece of data (for example, an address, date of birth and bank account details, if combined, could be used for identity theft).

Factors to consider include:

- **Who is affected by the breach?** The IPC assessment will include reviewing whether individuals and organisations have been affected by the breach, how many individuals and organisations have been affected and whether any of the individuals have personal circumstances which may put them at particular risk of harm.
- **What was the cause of the breach?** The IPC assessment will include reviewing whether the breach occurred as part of a targeted attack or through inadvertent oversight. Questions include: Was it a one-off incident, has it occurred previously, or does it expose a more systemic vulnerability? What steps have been taken to contain the breach? Has the data or personal information been recovered? Is the data or personal information encrypted or otherwise not readily accessible?
- **What is the foreseeable harm to the affected individuals/organisations?** The IPC assessment will include reviewing what possible use there is for the data or personal information. This involves considering the type of data in issue (such as health information personal information subject to special restrictions under s.19(1) of the PPIP Act), if could it be used for identity theft, or lead to threats to physical safety, financial loss, or damage to reputation. Who is in receipt of the data? What is the risk of further access, use or disclosure, including via media or online? If case-related, does it risk embarrassment or harm to a client and/or damage the IPC's reputation?

- **Guidance issued by the Privacy Commissioner on assessing eligible data breaches**
Upon becoming aware of a possible data breach, the IPC will take into account any guidance issued by the NSW Privacy Commissioner.

In order to mitigate the breach, the IPC will consider the following measures:

- Implementation of additional security measures within IPC's own systems and processes to limit the potential for misuse of compromised information.
- Limiting the dissemination of breached personal information. For example, by scanning the internet to determine whether the lost or stolen information has been published and seeking its immediate removal from public sites.
- Engaging with relevant third parties to limit the potential for breached personal information to be misused for identity theft or other purposes, or to streamline the re-issue of compromised identity documents. For example, contacting an identity issuer or financial institution to advise caution when relying on particular identity documents for particular cohorts.

Step four: Notify

If an eligible data breach has occurred, the notification process under Division 3 of the MNDB Scheme (Part 6A of the PPIP Act) is triggered. There are four elements of the notification process:

1. Notify the Privacy Commissioner immediately after an eligible data breach is identified using the approved form.
2. Determine whether an exemption applies: If one of the six exemptions set out in Division 4 of the MNDB Scheme applies in relation to an eligible data breach, the IPC may not be required to notify affected individuals. The IPC has produced [guidance to agencies on exemptions from notification](#).
3. Notify individuals: Unless an exemption applies, notify affected individuals or their authorised representative as soon as reasonably practicable.
4. Provide further information to the Privacy Commissioner.

The IPC recognises that notification to individuals/organisations affected by a data breach can assist in mitigating any damage for those affected individuals/organisations and is consistent with the IPC's regulatory role. Notification demonstrates a commitment to open and transparent governance, consistent with the IPC's approach. If a data breach is not an eligible data breach under the MNDB Scheme, the IPC may still consider notifying individuals/organisations of the breach dependent upon the type of information that is involved, the risk of harm, repeated and/or systematic issues and the ability of the individual to take further steps to avoid or remedy harm.

Notification should be undertaken promptly to help to avoid or lessen the damage by enabling the individual/organisation to take steps to protect themselves. The MNDB Scheme requires an agency to take reasonable steps to notify affected individuals as soon as practicable.

The method of notifying affected individuals/organisations will depend in large part on the type and scale of the breach, as well as immediately practical issues such as having contact details for the affected individuals/organisations. Considerations include the following:

When to notify

Individuals/organisations affected by a data breach will be notified as soon as practicable. Whilst this policy sets a target of notification within 5 days; practical factors are also recognised. Where all individuals affected by an eligible data breach cannot be notified, the IPC will consider issuing a public notification on its website.

How to notify

Affected individuals/organisations should be notified directly – by telephone, letter, email or in person. Indirect notification – such as information posted on the IPC’s website, a public notice in a newspaper, or a media release – should generally only occur where the contact information of affected individuals/organisations is unknown, or where direct notification is prohibitively expensive or could cause further harm (for example, by alerting a person who stole the laptop as to the value of the information contained). A record of any public notification of a data breach will be published on the IPC’s website and recorded on the Public Data Breach Register for a period of twelve months.

What to say

Section 59O of the PPIP Act sets out specific information that must, if reasonably practicable, be included in a notification:

1. the date the breach occurred
2. a description of the breach
3. how the breach occurred
4. the type of breach that occurred
5. the personal information included in the breach
6. the amount of time the personal information was disclosed for
7. actions that have been taken or are planned to secure the information, or to control and mitigate the harm
8. recommendations about the steps an individual should take in response to the breach
9. information about complaints and reviews of agency conduct
10. the name of the agencies that were subject to the breach
11. contact details for the agency subject to the breach or the nominated person to contact about the breach.

Other obligations including external engagement or reporting

The IPC will also consider whether notification is required by contract or by other laws or administrative arrangements to take specific steps in response to a data breach. These may include taking specific containment or remediation steps or engaging with or notifying external stakeholders (in addition to the Privacy Commissioner), where a data breach occurs.

Depending on the circumstances of the data breach this could include:

- NSW Police Force and/or Australian Federal Police, where the IPC suspects a data breach is a result of criminal activity
- DCS, where a data breach could have an impact on the IPC’s IT network or could affect the operations or data holdings held by another NSW government agency
- Cyber Security NSW, the Office of the Government Chief Information Security Officer and The Australian Cyber Security Centre, where a data breach is a result of a cyber security incident
- The Office of the Australian Information Commissioner, where a data breach may involve agencies under the Federal jurisdiction
- Any third-party organisations or agencies whose data may be affected
- Financial services providers, where a data breach includes an individual’s financial information

- Professional associations, regulatory bodies or insurers, where a data breach may have an impact on these organisations, their functions and their clients
- The Australian Cyber Security Centre where a data breach involves malicious activity from a person or organisation based outside Australia.

Step five: Review

The IPC will further investigate the circumstances of the breach to determine all relevant causes and consider what short or long-term measures could be taken to prevent any reoccurrence. Depending on the nature of the breach step five may be completed as part of the assessment of the first four steps and mitigation of the breach as detailed in step three above.

Preventative actions could include a:

- review of the IPC's IT systems and remedial actions to prevent future data breaches
- security audit of both physical and technical security controls
- review of policies and procedures
- review of staff/contractor training practices
- review of contractual obligations with contracted service providers.

Any recommendations to implement the above preventative actions are to be approved by the CEO and documented in the IPC's electronic record keeping system (22/56/DJ). Consideration will be given to reporting relevant matters to IPC's Audit and Risk Committee.

8. Communication Strategy

The Manager Systems and Corporate Services will be responsible for all communications issued under this Policy. The IPC will aim to notify affected individuals, and external reporting agencies within five business days of a data breach of IPC held information being reported to the IPC. Notifications to individuals will have regard for this Policy as well as the IPC's Privacy Management Plan. Where engagement with external reporting authorities is required, the Manager Systems and Corporate Services will consult with the Manager Communications and Corporate affairs and other Executive Team members as required. The IPC's Business Continuity Plan contains template communication messaging for specific incidents including a cyber security incident.

Document information

Identifier/Title:	IPC Data Breach Policy
Business Unit:	Business Improvement
Author:	Director, Business Improvement
Approver:	Chief Executive Officer
Date of Effect:	October 2023
Next Review Date:	October 2024
EDRMS File Reference:	D20/016412/DJ
Key Words:	Data Breach, eligible data breach, notification, personal information, health information, serious harm, containment

Document history

Version	Date	Reason for Amendment
1.0	October 2016	Draft for internal consultation
1.1	November 2016	Revised draft to incorporate CEO/IC feedback
1.2	4 November 2016	Approved by CEO
1.3	June 2020	Updated to take account of machinery of government changes
1.4	June 2022	Review of Policy and addition of Reporting section of Policy
1.5	October 2023	Review of Policy to include introduction of the MNDB Scheme
